

Kamstrup A/S

The production company Kamstrup A/S has achieved significant savings by means of VMI in a short period of time.

Kamstrup is not afraid of taking the lead when it comes to new methods and new technology to gain a competitive advantage. With the implementation of VMI they have achieved the full benefit of their effort. The administrative costs were reduced 50% after only 3 months and at the same time they experienced an unexpected, but very welcome, side effect on inventory bindings.

Outside own walls

An increasing number of companies choose to place the responsibility for replenishing their inventories with their suppliers. By doing so, the use of administrative resources is typically lowered and inventory is managed far more effectively. Kamstrup also saw the benefits in looking outside their own house. If they were to gain significant competitive advantages it was necessary to involve the entire supply chain.

Quick and significant profit

Kamstrup's first two pilot suppliers were operational in only three months after the contract agreement with Videlity. And the results were pleasing. After three months the administrative costs for the suppliers were reduced 50%. Furthermore, a reduction on 30 to 50% on inventory bindings concerning the involved suppliers showed up as a much appreciated side effect.

More than just data

When a company like Kamstrup decides to place a great part of the responsibility for inventory control on their suppliers it is a significant paradigm shift. Besides trust in your suppliers, it takes a system that is 100% reliable. Videlity solutions are much more than a system where you just provide data for your suppliers. The system also ensures and controls stated goals, methods and processes. The system automatically notifies on deviations, delays and critical situations - across standards, languages, time zones and different ERP systems. It is user friendly and easy to implement both at the company itself and afterwards at the suppliers. This helps ensure the type fast and significant results that, for example, Kamstrup has experienced.

Kamstrup is a leading international producer of meter solutions for the district heating and light and power industry. The company situated in Skanderborg (DK) is a subsidiary company to the Danish oil company OK a.m.b.a. and has 375 employees.
