New Release from Videlity

VIDELITY SOFTWARE A/S IS PROUD TO ANNOUNCE THE LATEST VERSION OF ITS WORLD CLASS PRODUCT. VIDELITY VERSION 5.0 CONTAINS ENHANCEMENTS IN ALL OF VIDELITY'S MAJOR MODULES AND MANY POWERFUL NEW FUNCTIONS DESIGNED IN CONJUNCTION WITH VIDELITY'S CUSTOMERS. SINCE VIDELITY IS CONSTANTLY EVOLVING TO SUPPORT BEST PRACTICES ALL VIDELITY CUSTOMERS WILL BENEFIT BY UPGRADING TO THIS NEW VERSION. CUSTOMERS CURRENTLY RUNNING A SOLUTION OLDER THAN SIX MONTHS ARE ESPECIALLY ENCOURAGED TO TAKE ADVANTAGE OF THIS UPGRADE.

Videlity Version 5.0 includes:

Supplier Collaboration

Enhanced Features:

Purchase Orders

- Send electronic purchase orders to your suppliers in the way that best suits them, using anything from email to web services.
- Receive electronic order confirmations.
- Receive automatic notification of events and errors.
 - Missing order confirmation
 - Deviations from order confirmation
 - Many others
- Save 30% to 50% by improving transaction costs, reducing delays and errors.
- Videlity's solution is extremely easy to deploy and scale, giving customers incredibly fast roll-out.

Exciting new functionality developed and designed with Videlity's customers in mind:

- Order confirmations can be changed through the user interface.
- Order lines can be split over different delivery dates.
 - If 10 pieces of product X are ordered for December 24th, the vendor can acknowledge 6 pieces for the 24th and 4 pieces for the 31st. This event will trigger a notification that the original order was changed.
- Units of measure can be converted.
 - A vendor can configure the system to convert e.g. 1 *box* of item X into 100 *pieces* of item X.
- EDIFACT support is included.
 - Videlity can generate EDIFACT in-house format for the ORDERS document. This allows you to include EDIFACT vendors via Videlity as well as other vendors.
- Item Price can be suppressed.
 - A company can configure their system *not* to display their recorded price on the order screen.

Vendor Managed Inventory

- Give your vendors a safe, flexible, and easy way to manage your inventory based on agreed upon criteria.
- Scalable per vendor: full electronic integration or simple web/email solution.
- Receive automatic notification of events and errors.

- Missing or inadequate order confirmation
 - Missed delivery date
 - Many others
- Benefits your company by improving service levels, reducing inventories by 30%, and reducing transaction costs by 50%.

Exciting new functionality developed and designed with Videlity's customers in mind:

- Dual sourcing improved; separate vendor splits per warehouse are supported.
- Multiple fixed delivery days per warehouse are supported.
- Multiple order lines in a single transaction can be deleted or changed.
- Online help and manuals are available.
 - Both screen help and online manuals are available and configurable by a system administrator.
- Internal users can view the same screens as vendors by simply selecting the vendor ID up front.
- Sales Order Number field can be empty.
 - A vendor can create an order with a blank Sales Order Number field, leaving it to be filled in at a later time.
- Incomplete orders can be closed even with outstanding goods to be received.
- EDIFACT in-house support is included.
 - It is simple to integrate with selected vendors using EDIFACT. Videlity supports three core EDIFACT documents that are used for VMI purposes as in-house formats:
 - Sales Report (similar to existing Plan file)
 - Quote (similar to existing Order Confirmation file)
 - Order (similar to existing Order Relation file)

Invoice Facility

- Receive electronic invoices instead of paper invoices.
- Scale Videlity to use anything from advanced xml to simple printed invoices using Videlity's Remote Agent
- Reduce your transaction costs 30% to 40%.

Enterprise Collaboration

Enhanced Features:

Enterprise Inventory

- Consolidate inventory information across systems, companies, and countries. This provides quick and easy overview and enhances overall enterprise management with ATP checks, summary reports, and other management tools.
- Includes
 - Internal warehouses
 - In-transit stock
 - 3pl warehouses
 - Supplier consignment stock
- Match product numbers across systems. This provides easy overview and inventory level management across systems and warehouses
- Reduce overall inventory while increasing your service level.
- Videlity's solution is easy to deploy and scale – *no* programmers, *no* IT project.

Exciting new features, designed with the Customers in mind:

- New options for manual interaction. Enter production plans, order confirmations, and other information directly into Videlity's intuitive user interface, if you haven't yet setup electronic integration.
- Inventory History can now be viewed graphically
- You can now create Groups of warehouses, providing easy management across systems and companies
- New reports are available, such as a summary of Days of Inventory, total and per company inventory.

Enterprise Collaboration

- Provide a safe, flexible and easy way to handle you enterprise's internal trade.
- Match product numbers between systems.
- Receive automatic notification of events and errors.
 - Missing order confirmations
 - Inadequate deliveries
 - Many others

Document Exchange Center (Easy Broker)

- Provides a safe and powerful general purpose message broker for exchange of all files and documents.
 - Full log file
 - Extremely flexible and easy to use
 - Best in class management features
 - Proactive alerts
 - Record low cost of ownership

Customer Collaboration

Enhanced Features:

Sales Orders

- Receive electronic orders from your customers in the way that best suits them, using anything from xml to printed documents run thru Videlity's Remote Agent printer driver.
- Provides save and efficient processing, making it easy to integrate with existing systems.
- Receive automatic notification of events and errors.
 - Missing order information
 - Changed order information
 - Many more
- Reduce transaction costs 30% to 50% by reducing delays and errors
- Videlity is fast and easy to implement using it's simple drag and drop user interface. No programmers or IT project required.

Vendor Managed Inventory

- Provide a safe, flexible and easy way to manage your customer's inventory based on their future demand and mutually agreed upon criteria.
- Receive automatic notification of events and errors.
 - Missing order confirmation
 - Inadequate delivery
 - Many more
- Improve your service levels and planning processes.

- Reduce customer inventories by 30%.
- Reduce transaction costs 50%.
- Develop closer partnerships with your customers.

Invoice Facility

- Send invoices electronically instead of using paper invoices.
- Improve your ability to meet your customer's requirements.
- Your customers can take advantage of Videlity's "self service" features.
 - See invoices
 - Request retransmissions
 - Many other features
- Reduce handling and transmission costs.
- Improve customer satisfaction.

Collaboration Server

Enhanced Features:

Provide system administrator the ability to switch userid, so he sees the same screens as user he is assisting.

Configuration of the Videlity Printer Driver, used to create electronic documents, resides in the central Videlity Server for easy management.

Powerful and flexible functionality:

- Numbers formatted according to language setting
- Improved Notification Log sorting
- More flexible path names allowed
- Administrator can add subscription from the Manage Notifications function

The benefits, value, and high quality you get from Videlity are our main focus and we are sure you will be pleased with the results achieved with Videlity Version 5.0.
